

R-2000 is the higher standard in new homes.

When you choose R-2000, you get a home that is more comfortable, healthier to live in, technically advanced and environmentally responsible. No other home – new or old – can meet this standard.

Your R-2000 home will also give you peace of mind. R-2000 is more than a label – it's a guarantee of quality. You'll deal with a professional new-home builder who has earned an R-2000 licence who will ensure that your R-2000 home goes through the most comprehensive quality assurance process in the industry. Moreover, the quality is checked by an independent expert.

It all adds up to quality you can trust. Here's why:

— **Greater Comfort**

R-2000 homes are built for exceptional comfort – they have even, warm temperatures on the coldest winter nights, and are cooler in the heat of summer. There is fresh indoor air year round, and there's less dust and noise. With an R-2000 home comfort isn't left to chance.

— **A Healthier Home**

R-2000 homes are designed to give you and your family a healthier living environment.

Careful selection of building materials helps keep chemicals out of the house. An advanced ventilation system provides fresh, filtered air and removes moisture, particles and odours from your home around the clock.

— **Leading-Edge Technology**

The R-2000 Standard means that you get a state-of-the-art home and lasting value for years to come. Every R-2000 home comes with advanced, proven products and materials that yesterday's houses just can't offer, such as high-performance window systems, high-efficiency space and water heating, engineered building components and whole-house ventilation systems.

— **Exceptional Energy Efficiency**

Your R-2000 home will pay you back, year after year. You'll enjoy lower monthly energy costs without sacrificing comfort, convenience or fresh air. Expect heating bills that are one-third lower than in other new homes – homes that meet only building code requirements.

— **Better for the Environment**

Using energy creates pollution that damages our environment. Because R-2000 homes require substantially less energy to operate and use resources wisely, our environment gets a break. That's good news for everyone.

*R-2000 is more than a label – it's a guarantee of quality.*

— **Proven Quality**

With R-2000, quality isn't just a slogan – it's defined. The R-2000 Standard sets demanding performance requirements for your home. R-2000 quality assurance is a strict process of computer analysis –

inspections and on-site testing of your home that go way beyond what's required in building codes. Builders earn their R-2000 licence by taking special training and proving their expertise.

Your proof? Your R-2000 home certificate backed by the Government of Canada.

— **Peace of Mind**

You'll sleep easier in your R-2000 home knowing that your R-2000 builder is one of the best in the business and that your home passed the toughest quality assurance process in the industry. No matter how you look at it, you'll know you've made the right new home choice.
